6-4-3 CHARTS®

6-4-3 CHARTS STATISTICS KEY

SABERMETRICS

QAB -Quality At Bat %: hits, walks, hit-by-pitches, any sacrifice, reach base on error, any run scored via contact, 7+ pitch PA

wOBA -Weighted On-Base Average: combines all the different aspects of hitting into one metric, weighting each of them in proportion to their actual run value based on the relevant run environment (e.g. D1 Baseball 2022 and D2 Baseball 2022 are separate run environments)

wRAA -Weighted Runs Above Average: measures the number of offensive runs a player contributes to their team compared to the average player, with the average player having a wRAA of zero

RC -Runs Created: estimates a player's offensive contribution in terms of total runs, combining the player's ability to get on base with their ability to hit for extra base hits (our calculations leverage the "technical" representation of the formula)

GDP% -Grounded into Double Play %: the rate at which a player grounds into double plays with a runner on first

ISO -Isolated Power: slugging percentage minus batting average

BABIP -Batting Average on Balls In Play: excludes strike outs and home runs from the overall batting average, thus isolating balls that are in the field of play

HR/FB -Home Run/Fly Ball: captures the percentage of home runs hit relative to the number of fly balls hit

LOO -Leadoff Out %: measures how often lead-off hitters get out by a given pitcher

LOB -Left On Base %: measures how often runners are left on base calculated using a pitcher's actual hits, walks, and runs allowed results

FIP -Fielding Independent Pitching: estimates a pitcher's run prevention independent of defensive performance. FIP is based on outcomes that the pitcher alone controls: Ks, BB, HBP, & HRs allowed. These stats are used to approximate a pitcher's ERA assuming average outcomes on balls in play.

xFIP -Expected FIP: estimates a pitcher's run prevention independent of defensive performance. xFIP is based on outcomes that the pitcher alone controls: Ks, BB, HBP, & a given run environment's average HR/FB rate.

SIERA -Skill-Interactive Earned Run Average: quantifies a pitcher's performance by eliminating factors the pitcher cannot control themselves, where the ball in play type (e.g. GB/FB/LD) is adjusted for.

SPLIT TYPES

OVERALL	All
VS. LHP	Against Left-Handed Pitchers
VS. RHP	Against Right-Handed Pitchers
W/ RISP	With Runners in Scoring Position
W/ 2K	With 2 Strikes
VS. LHP W/ 2K	Against Left-Handed Pitchers with 2 Strikes
VS. RHP W/ 2K	Against Right-Handed Pitchers with 2 Strikes
CONFERENCE ONLY	Against Conference Opponents
HOME	As the Home Team
AWAY	As the Away Team
POWER	Extra Base Hits
POWER VS. LHP	Extra Base Hits Against Left-Handed Pitchers
POWER VS. RHP	Extra Base Hits Against Right-Handed Pitchers
